# 1 Introduction

Projectile is a web-based software made for service-oriented companies to help with process optimization. It features contacts and appointments, project management with time and cost tracking, a billing module, a document management and reporting system. In addition, Projectile contains fully integrated components for portfolio management, ticket management, risk and knowledge management.

Interfaces to MS Project, MS Exchange Server, various financial accounting systems and DATEV as well as other interfaces are available for Projectile.

With Projectile, projects, resources and budgets can be planned and defined in minutes. The integrated time and cost tracking is the basis for effective project supervision. The reporting system ensures complete project controlling and provides project managers with numerous overviews and charts. Projectile automatically generates offers, invoices and/or internal accounting documents from the tracking data. It ensures that all work billable is actually invoiced. In addition, supplier invoices, incoming and outgoing payments are managed with Projectile.

## Major advantages of Projectile are:

- Central data management of all project-related data
- Worldwide access to the entire database
- Clarity and transparency of processes
- Effective project controlling through up-to-the-minute project information regarding deadlines, costs and effort
- Increase in productivity and thus also the profitability of your projects

The software solution Projectile supports you in your daily project work and helps you to further optimize the added value of your projects.

## The concept of Projectile at a glance:

- Web-based application based on a Java server
- Platform, database and location independence
- Open system architecture enables optimal adaptation to your project business
- Integrated workflow engine for optimal adaption of your processes
- Email notification system as early warning system and to automate evaluations
- Integrated time and cost tracking, offers, orders, invoices
- Simplicity of use through a uniform user interface
- Up to date reports at your request
