2.01.17 Customerwise Occupation

The mask **Customerwise Occupation** manages the charging and invoicing rates (per hour), which are used differently from the standard rates (usually defined in the activities) for a specific customer.

The mask consists of the following elements:

- **Company:** In this field, the system automatically defaults the activity-related contact.
- **Occupation:** This field indicates the created customer-related activity, in which the upper and lower activities can also be created.
- **Description:** This field indicates the description of the activity.
- **External Hourly Rate:** This field indicates the external calculation rate per hour of this activity. This rate is then (if there is no project-related change) used for offers and invoices.
- **Internal Hourly Rate:** In this field the internal billing rate per hour for the customer is defined. However, this rate for cost accounting is only used if no project-related allocation rate or employee-related rate is defined in the system.
- **Note:** This field is used for entering remarks.
