2.01.19 Address

The Address mask manages the additional addresses of a [contact](#). These additional addresses are classified by means of the address type.

General Data

- **Company:** This field assigns the address to the corresponding contact.
- **Address Type:** This element is used to classify the address and contains the following characteristics: visitor address, billing address (for invoices), delivery address (for delivery notes) and postal address.
- **Other Company Name:** An addition to the company name can be entered in this field.
- **Street:** The street is entered in this field.
- **Postal Code/City:** In these fields, the postcode and city for the address are entered.
- **Country:** This field indicates the country.

Miscellaneous

- **int. Key:** This numeric field uniquely identifies the address. This number is proposed by the system.
- **Internal Mail Code:** This field identifies the internal mail codes of the addresses; for example, for industrial estates and technology centers.
