2.01.29 Price (Article Price)

The Price mask manages the article prices in the system if there are prices that differ from the purchase and sales price. These prices are valid and have up to three price levels.

The mask consists of the following elements:

- **Item:** This field assigns the defined price to an item. The items of the [article](#) mask are managed by the system.
- **Quantity:** This field describes the number of articles for the defined price (here 1 MYSQL interface).
- **MeasureandUnit:** This field indicates the unit (person days, pages, pieces, weight, hours, dimension, ...) for the price of the item.
- **Valid:** This field is used to enter the validity date of the price.
- **Purchase Price:** This field allows you to enter the purchase price for the defined item/external service. This price is required in internal cost accounting for project and cost evaluations.
- **Sales Price (Standard Price, Customer Price and Promotion Price):** These fields allow you to enter the sales prices for the defined article. These prices can be preset as recommended sales prices in the [external costs](#) mask.
- **Note:** This field allows you to enter comments.
