2.02.09 Project-Wise Occupation

The mask **project-wise occupation** manages the activity records that are adapted for a defined project. If these records are defined for a project or sub-project, these values override the global activity records (see also Costing and Pricing).

The mask consists of the following elements:

- **Project:** This field indicates the associated project.
- **Occupation:** This field indicates the activity that is adapted for this project. Changes made here will not change the original activity record.
- **Description:** This field indicates the name of the activity and may differ from the standard name.
- **External Hourly Rate:** This field indicates the calculation rate of the activity. This is then invoiced to the customer for this project.
- **Internal Hourly Rate:** This field defines the internal billing rate.
- **Note:** This field is used to enter remarks.
