## 2.02.10 Project-Wise External Price

The mask **project-wise external price** manages the activity records that are adjusted for a defined project. If these records are defined for a project or sub-project, these values override the global employee record (see also cost and pricing).

The mask consists of the following elements:

- **Project:** This field indicates the associated project.
- **Employee:** This field identifies the employee for whom this project is being customized. Changes made here do not change the original employee record.
- **Function:** This field is preset with the function of the employee and can be changed for the defined project.
- **External Hourly Rate:** The calculation rate of the employee is defined here. This will be charged to the customer for this project.
- **Job Price Internal:** The internal hourly rate of the employee is defined here.
- **Note:** This field is used to enter remarks.
