2.01.03 Timed Action

The “Timed Action” form administers the system services for periodic actions within Projectile. This includes for example, reminders or information per e-mail to various users or user groups as well as automatically generating evaluations and similar procedures. For every [timed action](#) a [repeating rate](#) and a [period](#) can be defined in here.

Tip: further information on this topic can be found under article [3.11.01 System Data Administration](#).

Timed action Capacity Chart Team II, Cambridge

Description: Capacity Chart Team II, Cambridge

This user runs the timed action: [User Selection] Hahn Katrina

TimedAction activated: ☒

Document type: CapacityChart

Option: Service Update Availability Check

Professional query: [Selection]

Event: [Selection]

Usergroup: [Selection]

Recipient: [Selection] Timothy Jones

Configuration: CapacityChart 1 CapacityChart

Occurrence: 1 Period: Daily DaysTillAfterPeriod: d OnlyWorkingDays: ☐

Weekday: Monday Tuesday Wednesday Thursday Friday Saturday Sunday

First occurrence: 01.10.2009 18:14:13 Last occurrence: [Selection] Next occurrence: 07.10.2009 00:00:00

This form contains the following elements:

On the "Master Data List" tab:

- **Description:** This field specifies and allows for the description of the time service.
- **This user runs the time service:** In here the user of the time service is defined.
- **Time Service active:** This field shows if the time service is active.
- **Document Type:** This field specifies the document type, upon which the time service is based and allows for the correct allocation of a corresponding option. If this field is not filled, then the option available is the standard time services (reminders, status messages...).
- **Option:** This element specifies the type of service. Herewith the following options are allowed: document-type action (forms) and standard time services (a detailed listing of this is located in the Administration Guide).

- **Professional Search:** This selective box lists all available professional searches of the system, that have allocated report definitions. If a professional search is allocated here, then this request will be periodically executed through the time service and sent to the recipient.
- **Event:** The events that will trigger the time service will be shown here (in case the time service is not to be adjusted periodically).
- **User Group:** This field specifies the recipient (based on the authorized groups in the system) of the time service.
- **Recipient:** This field specifies the recipient (based on the [employees](#) in the system) of the time service.
- **Configuration:** If an action is chosen as an option for the time services within a document type (for example an [analysis](#)), then this action has to be configured here.
- **Repeating after x Periods:** This field indicates the number of periods for which the time service is to be repeated.
- **Period:** This field indicates the maximum periods for the time service. The user can select between "annual", "monthly", "weekly", "defined days", "daily" and "hourly". Then defined time service starts the execution of a defined action within this period.
- **Difference to Period Beginning:** This field defines the difference to the beginning of the period.
- **Only working Days:** In this box a check mark is only set, if the period applies only to working days.

* **Remark:** This field allows for the entry of remarks to the time service.

- **User:** The user of the time services will be specified here.

Timed action 1254413653140-0

Mail subject Service Update Availability Check

Text

Note

Discard after 960 min

On the "Miscellaneous" tab:

- **Repeat after x Periods:** This field specifies the number of periods, for which the time service is to be repeated.

- **Periods:** This field specifies the allowed periods for the time service. The user can choose between “yearly”, “monthly”, “weekly”, “exact weekdays”, “daily” and “hourly”. The specified time service starts the processing of a specified action within this period.
- **Weekday (Monday until Sunday):** These fields specify the weekdays and are only for the period “exact weekdays” relevant. The specified time service starts with this option on the exact chosen day(s).
- **Mail-Subject:** This element allows the specification of the subject heading for the generated e-mail.
- **Text:** Here, as a reminder, is where a text for a generated e-mail can be written.
- **First, Last and Next Time Service:** These fields log the first, last and next request of the time service. These fields are needed for the periodic processing of the time services.
- **Discard to:** In case the system is overloaded with the processing of all time services, then it is possible to enter into this field how many minutes after the deadline a time service is still valid. If a time service is after this deadline no longer valid, then the time service will be given the next appointment.

The Document Type includes the following actions:

- **Execute now:** With the help of this action, it is possible to execute a time service immediately. The result (for example a configured analysis) will also be shown in the application.
- **Setting the Configuration:** With the help of this action the configuration of the time service will be set. In case analysis is chosen as document type, then the corresponding analysis will be opened. The desired selection criteria will be specified and the analysis stored.
