2.01.20 Address

The Address mask administers additional addresses from the contact. The additional addresses are classified with help of type of address.

Tip: For more on this subject see chapter [4.1.04 Contact System](#)[4.1.04 Das Kontaktsystem](#).

The mask consists of the following elements:

- **Address:** This element designates distinctly the address in System.
- **Contact:** This field assigns the associated contact to the address.
- **Street:** The street is entered in this field.
- **Address Postal Code/City:** The postal code and the city for the address is entered in this field.
- **Country:** This field specifies the country.
- **House Post Code:** This field specifies the house post code of the address; e.g. for industrial parks and technology centers.
- **Type of Address:** This element is used to classify the address and consists of the characteristics visitor's address, commercial invoice address, delivery address and postal address.
