# 2.08 Workflow Module

Version 2.6 is the first version to be delivered with the workflow engine from Projectile, which is based on OSWorkflow and is part of the basic version. This basic module has been improved in versions 2.7 and 2.9. Using the workflow engine, existing project workflows and standard workflows can be adjusted and monitored (feedback of tracking and recording, absence requests, travel cost approval, ...).

In the workflow configuration files (administration - system configuration - workflow) settings can be stored e.g. which user should be notified about certain events and/or from whom an approval is required. Further information about administration and configuration can be found in the administration guide.

**Tip:** For more on this subject see chapter [3.09 Workflow-Module](#).

The screenshot shows a web application window with a table containing workflow data. The table has columns for 'InitiationDate', 'Initiator', 'WorkflowDescription', 'BallotDescription', 'BallotMode', and 'BallotRound'. A single row of data is visible, representing an absence request initiated by Carter Simon on 18.04.2012.

	InitiationDate	Initiator	WorkflowDescription	BallotDescription	BallotMode	BallotRound
1	18.04.2012 14:31:24	Carter Simon	Absence request Carter Simon, Holiday from 26.03.2012 to 30.03.2012	Unitleiter	Pro: ONE, Contra: ONE	1
