2.12.01 Component

With the **Component** form the structure of services or products are stored in the system. The components contain, among other features, information about the product structure, the version, the employee, the tickets and the assigned project data.

Tip: For more on this subject see chapter [3.08 Product Management](#)

Component Project data

Document Edit View Back references Actions

Master data Workflow Misc Comments

Name: Project data

Description: Project data (Master data, template, ...)

Keywords: [1] GUI [2] COSTS [3] DATABASE [4] PROJECT

Parent component: [X]

Sub component:

Sub component
1 Master data administration
2 Template and import
3 Project planning and charts

Dependent components:

Dependent on:

Tickets:

Status	Name	Type	Severity	TargetVersion	CreateDate
03	Problem with splitting jobs in project planning	Troubleshooting	5 - Fatal		12.10.2009
02	New introduction to project planning	Test	3 - Necessary	ModuleVersion Project data 3.8	12.10.2009
00	Extension for RM-Management	Extension	4 - Important		09.10.2009

Current version: 3.8

Versions:

VersionNumber	PlannedReleaseDate	Description
3.6	01.06.2009	Version 3.6
3.7	01.09.2009	Version 3.7
3.8	01.12.2009	Version 3.8

The form contains the following elements:

On the "Master Data" tab:

- **Name:** This field labels the components as short form with maximum 50 characters.

- **Description:** This field labels the components as long form with maximum 255 characters.
- **Keywords:** The defined keywords of the component can be assigned here. The keywords can be defined in the Product Management - Keywords form.
- **Parent Component:** This field characterises the existence of a parent component. If the element is not populated, the component itself is the top component (i.e. a product or service). When creating sub-components, this entry is automatically filled.
- **Sub Component:** This component contains a list of all sub-components.
- **Dependent Components:** All components are transferred into this drop-down box, which have an indirect dependency of the defined component. Using this assignment, all dependencies outside of the component structure can be documented. When the assignment to this drop-down box occurs, the components, in the selected components in the element "dependent on", are automatically transferred.
- **Dependent on:** In this drop-down box, all components are transferred which (independent of the component structure) are necessary for the defined components. When the selection in this drop-down box is made, the components in the selected components in the element "dependent components" are automatically transferred.
- **Tickets:** This field contains all change requests directly applied to the components. These tickets define change requests (extensions, reductions, troubleshooting, ...). These tickets are administered in the [Change Request](#) form.
- **Current Version:** Information field for the current (can differ from the official) version.
- **Versions:** This element specifies the versions and/or modification status or the applied components and their attributes.

The screenshot shows a web application window titled "Component Project data". It features a menu bar with "Document", "Edit", "View", "Back references", and "Actions". Below the menu is a tabbed interface with "Master data", "Workflow" (selected), "Misc", and "Comments". The "Workflow" tab contains four sections, each with a label, a dropdown menu, a set of icons, and a checkbox with a user name:

- To be informed:** Dropdown menu, icons, checkbox, and user "Timothy Jones".
- Implementor:** Dropdown menu, icons, checkbox, and user "Conner Jane".
- Quality assurance:** Dropdown menu, icons, checkbox, and user "Tate Adam".
- Approvers:** Dropdown menu, icons, checkbox, and user "Williams George".

On the “Workflow” tab:

- **To be informed:** All employees , who should be informed by status changes within the component (based on the change request) are transfered to here. The employees are informed using the mail system “Mailer”.
- **Implementer:** All employees, who should take and process the change requests are transfered to here. The employees are informed using the mail system “Mailer”.
- **Quality Assurance:** All employees, who should take and process the marked “finished” change requests are transfered to here (for example, for quality control). The employees are informed using the mail system “Mailer”.
- **Approvers:** All employees, who should approve tested change requests are transfered to here (for example, for quality control). The employees are informed using the mail system “Mailer”.

On the “Misc” tab:

- **Number:** Key field of the component.
- **Project:** In the project field, a component can be assigned to one or more projects. The projects can be defined and modified in the document type project.
- **Jobs:** In the jobs field, a component can be assigned to one or more jobs. The jobs can be defined and modified in the document type jobs.

On the “Comments” tab:

- This element is designated for comments regarding components with information about the date and publisher.

The document type contains the following actions:

- **Report:** Using this action, a freely definable list of the component structure can be generated when using ReportMaker. This action refers to all components including the sub-components from the invoked document.
- **Show Change Requests/Tickets:** Using this action, various lists of the change requests can be generated when using ReportMaker. This action refers to all components including the sub-components from the invoked document.
