2.06.01 Absence Entries

Absence entries (vacation, illness, business trips, ...) are used for working time administration and resource management. Especially, longer absences should be recorded to the system, so the prognosis in the resource management (see also chapter [2.5.04 Capacity Chart](#)) has a solid basis.

Tip: For more on this subject see chapter [4.3.6 Working Time Recording](#).

Note: The option “Employee Absences” is identical to the described function, but can only be used by the logged on user. This option is used if the employee enters his/her own absences.

The screenshot shows a web application window titled "TrackEmployeePresencesView". It features a table with columns for dates and three employee names: Conner Jane, Timothy Jones, and Williams George. Each date row contains three dropdown menus for selecting absence types. The dates range from 16.10.2009 to 31.10.2009, with weekends (17.10.2009, 18.10.2009, 24.10.2009, 25.10.2009) highlighted in grey. Buttons for "Preview", "Reset", "Save", and "Close" are located at the top and bottom of the table.
