3.02.01 Personal Clipboard

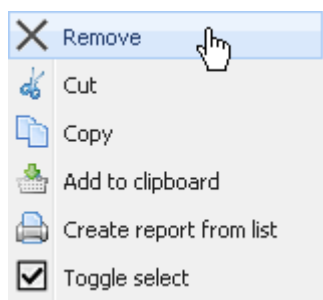

The personal clipboard of the logged on user is located in the bottom area of the left navigation menu. Using the personal clipboard, a user can administer his/her data as browser favorites. In the example below, the personal clipboard with the documents (Project 1 Introduction Projectile 2.5, Project 3.1 Introduction Accounting, Project 3.2 Projectplanning, Project 3 Introduction Projectile and Project 7 Update Projectile) are displayed:

For editing fields with multiple assignments, as in the personal clipboard, there is a central button for all editing functions (delete, cut, paste, create, create report,...) and the search window for full-text search. This button opens with either mouseover (default) or clicking the button.

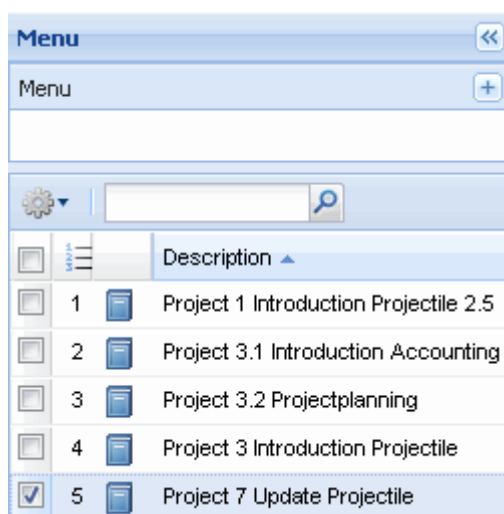

The following tools are available for editing the clipboard:

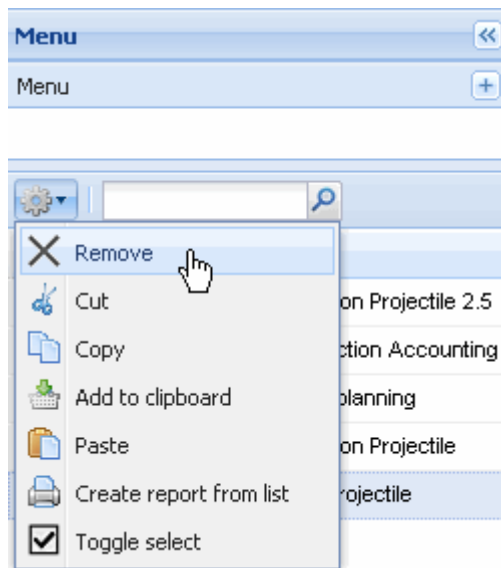

Remove entry (and not copied in the cache memory), cut entry (and copy to the cache memory), copy the entry in the personal clipboard, add entry to clipboard (when data is in cache memory), create report from list (using [Report Maker](#)) and invert (toggle) entries (all selected entries are not marked or vice versa).

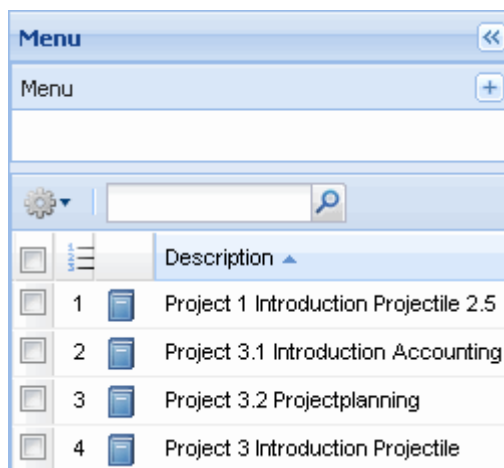

Entries can be either removed or cut from the clipboard. The difference: Using cut, the entry is copied to the cache memory and is available for the pasting. To remove entries from the clipboard, these entries are marked ...

... and then through clicking on remove, the entry ...

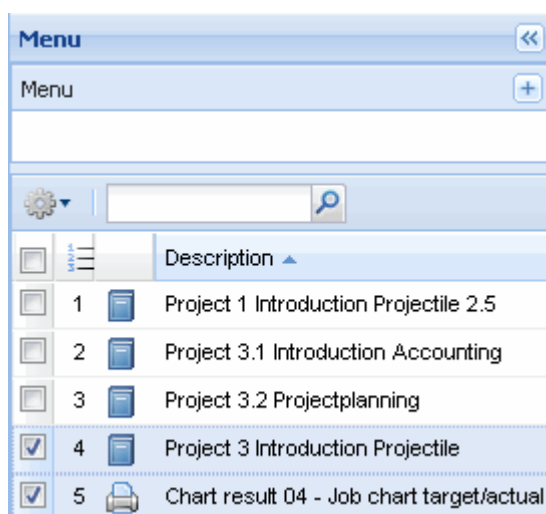

... can be removed (here Project MSP).

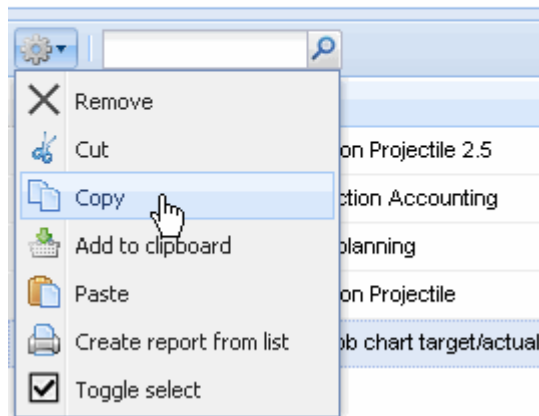

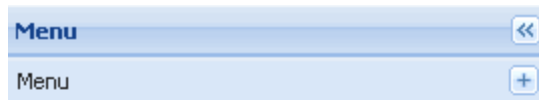

When using cut, the entries are removed, but then held in the cache memory, so these entries are still available for pasting.

Entries in the clipboard (or search queries) can also be copied. When marking the entries ...

... and copying ...

... the appropriate entry is copied and ...

The screenshot shows a software window titled 'Project chart JB0001-BB Project chart'. It has a toolbar with icons for generate, save, delete, add, copy, paste, and print, along with a menu bar (Document, Edit, View, Back references). Below the toolbar are tabs for 'InputData', 'Parameters', 'Format', and 'Results'. The 'InputData' tab is active, showing two sections. Section 1, 'Name: If you would like to save a chart please enter a description', contains fields for 'Name' (JB0001-BB), 'Description' (Project chart), 'Chart' (04 - Job chart target/actual with a green checkmark), and 'Report Selection'. Section 2, 'Input data: To gather all the documents relevant for the chart please use the search engine (if need be repeatedly)', contains a 'Search' dropdown, 'Search word' and 'Category' input fields, and an 'Input data' section with a 'No entries' dropdown. A context menu is open over the 'Input data' section, showing 'Paste' (with a hand cursor) and 'New document' options. At the bottom, there are fields for 'Chart period' (Current year) and 'Start' (01.01.2009).

... can be pasted to a different element. When clicking paste, the copied entry is then copied to the selected element.
