3.04.2 Document Administration "Files"

Projectile contains in the optional Groupware-Module an integrated document administration. By using document administration, index structure can be created in the web-server and files can also be transferred and administrated. The document administration contains personal folders and project folders. This folder-structures are completely liable to the authority of the system.

Accessing Document Administration

Files are either accessed directly from the function bar in the work area or over a project by using the button  (if there are no files in the project folder) or  (if there are files).

The screenshot shows the 'Project 10 Introduction Projectile' web interface. The 'Files' tab is selected in the top navigation bar. The main content area displays project details and a list of subprojects.

Project Details:

- Project number: 10
- Status: Advance
- Description: Introduction Projectile
- Project start/end date: From 04.11.2009 To 11.11.2009

Subprojects:

Number	Description	Status
10.1	Planning	Advance
10.2	Customizing	Advance
10.3	Introduction	Advance

Processes:

Process number	Description	Begin date planning	End date planning
10-1	Project Management	04.11.2009	11.11.2009

Milestones: No entries

Grade of completion: No entries

In the example the project folder for the project 106 (BS06) opens with three documents.

Using document administration

In the following example, four files are copied in the web-server for the roject QM-Module by using File .

The button “Upload” opens a dialog ...

... to choose local files and to copy and administrate them in the web-server. In the upload dialog indexes can be created. In the following example, in the folder of the project ...

... an index "Interface" is created.

In the new index (Element Upload Directory) any files can be now copied. If this index is not chosen, the selected files are directly copied in the folder. By using the button "Search", files for the upload can be selected in the following step.

At first a standard dialog for opening files is opened.

Afterwards the desired file is marked and it is transferred by clicking on "Open". In the example the file exchange-interface.doc is chosen. Further files can be analogously selected for the upload.

Upload

After this selection, the copying process is operated with "Upload". The selected files are transferred by the system into the web-server in the folder (or into the associated index).

Upload

The folder of the project 92 QM-Modul contains now four files. The transfer of the files into the web-server is accordingly journalized.

The documents, which are administrated in the Flyer, can usually be opened directly or stored locally.

Note: Depending on the operating system and used browser, some file types can not be displayed usefully (in MS Internet Explorer for example CSV- and MS Project-Files).

In Flyer a folder-structure can also be searched by using the magnifying glass.

All file names and characteristics (key-words, descriptions,...) are searched. The administrated files can not be searched by the contents.
