3.11.09 Item Administration

Projectile offers optionally the possibility to administer foreign services or items and to bill this project-related. Assigning the foreign services or items to the [3.11.09 Verwaltung von Artikelnproject](#), can be performed in the document type [item sheet](#).

When creating a new item or external service, various field are automatically pre-populated. In the standard version of Projectile the following fields are pre-populated:

- **Item:** Pre-defined with a consecutive number.

Item SQL-Server SQL-Server SQL-S	
Document Edit View Back references	
Master data Details Misc	
Item	SQL-Server
Name	SQL-Server
ShortName	SQL-S
Description	MS SQL-Server 2000
GoodsGroup	1 Projectile
Unit	Pieces
Purchase price	1.995,00 EUR
Selling price	2.300,00 EUR
Supplier	
Commission rate	%
DeliveryTime	d
Prices	No entries

Required fields: Item, Name

Characteristics:

- The description of the item or external service is used from the field short name and name (long text).

- The category of the item can be used to classify the item or service.
- The purchase price which should be entered for the own products are internal cost accounting, the product costs or development costs. As a rough rule of thumb, the total development costs are divided through the planned sales volumn.
- The suggested retail price of the external services should be entered as the selling price without any deductions. This selling price is pre-defined in the document type [item sheet](#) and can then be modified.
- In the field "Stock" the stock of the item can be entered. When assigning the article to a project, the extracted quantity of the article is considered and automatically recorded from the stock.
- In the field Min. stock the smallest quantity of the item which must be available is entered.

Note:

External services can be administered using [purchase/foreign invoice](#). This approach is recommended even if the cash flow ([incoming payments](#) and - [foreign payments](#)) should be defined through Projectile.

The same external services should be either defined through external services or purchase/foreign invoice, so that the costs are not defined twice in the system.

Defining New Items

To define a new item, the functionality "Create" with the document type "Item" is applied.

After confirming the action a new document is generated.

The screenshot shows a software window titled "Item 1" with a menu bar (Document, Edit, View) and three tabs: "Master data", "Details", and "Misc". The "Master data" tab is active, displaying a form with the following fields:

Item	1
Name	
ShortName	
Description	
GoodsGroup	
Unit	
Purchase price	
Selling price	
Supplier	
Commission rate	
DeliveryTime	
Prices	

Additional details: The "Purchase price" and "Selling price" fields are followed by "EUR". The "Supplier" field has a dropdown arrow and four icons (document, magnifying glass, folder, and close). The "Commission rate" field is followed by a percentage sign (%). The "DeliveryTime" field is followed by a "d" for days. The "Prices" field has a button with a gear icon and the text "No entries".

After all information is entered, the document is saved using . In the example a new item "QM-Module 1.2" is created. This "external service" is based on internal development, which should be sold at EUR 2.200,00 each. Here, the internal price/purchase price is the calculated rate from the product development.
