3.06 Reportgenerator "ReportMaker" (continued 1)

Generate Reports:

The ReportMaker offers a variety of formats as output options.

The option "VIEW" ...

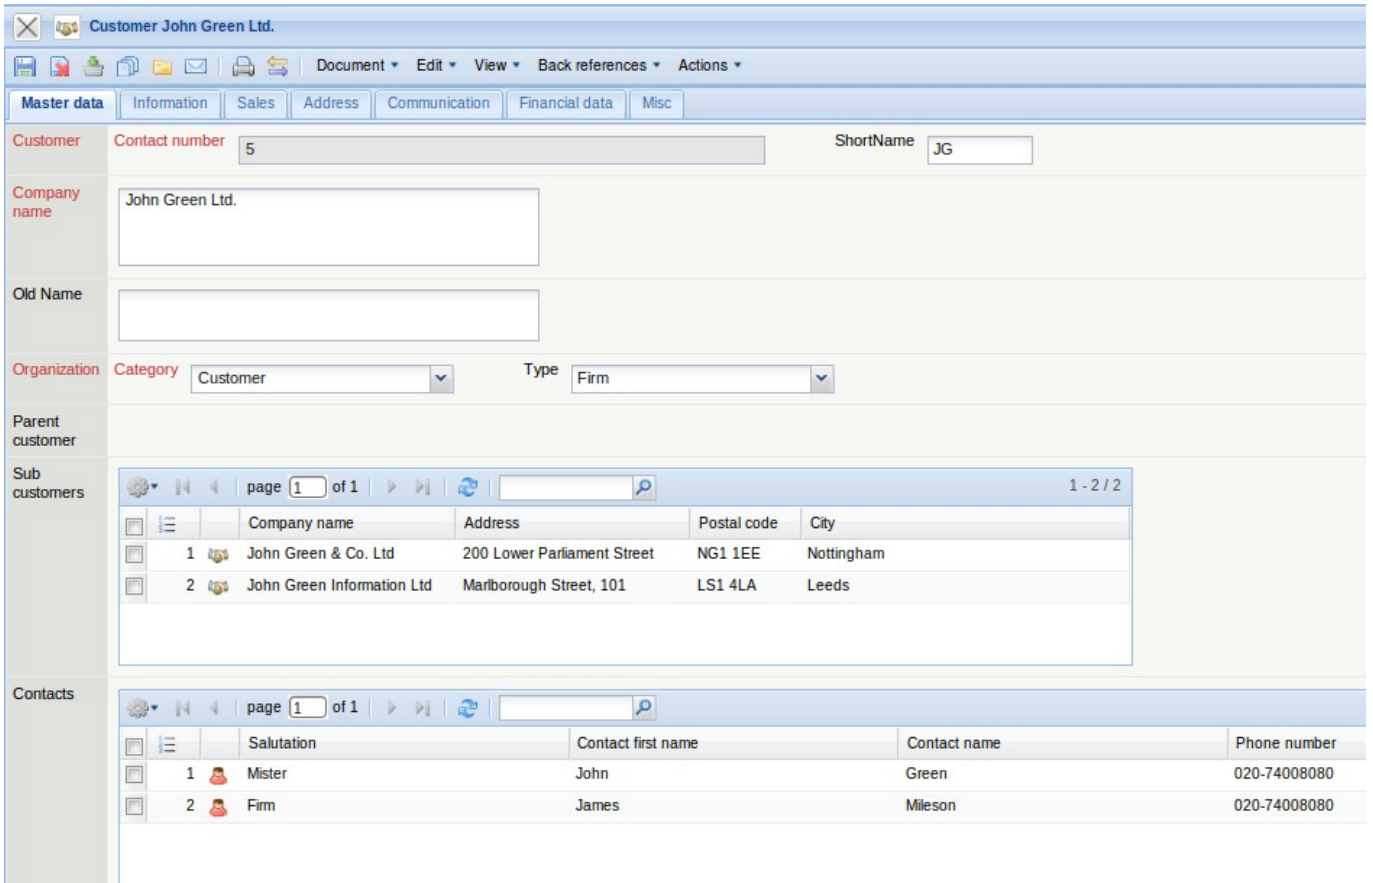

... creates the report directly in the application ...

Project	Number	Description	Customer	Status	Project manager	Planned Begin	Planned End	Planned Time[h]	Actual Time[h]	Difference[h]	Total Costs	Offer Amount	Net sum of billed invoices

			Sum					253,00	217,00	36,00	32.917,50	105,00	9.150,00

This functionality is, of course, completely subject to the authorization system, which means, a link is only created for records with the appropriate authorization (more information about the authorization system in the administration guide).

Another output option is "CSV". This output format is mostly used for spreadsheets (e.g. MS Excel) and standard letter functionality (data source for standard letters).

In the following dialog, the generated file can either be saved locally ...

...or can be opened directly.

... manager and project manager is assigned. All the other groups (with the exception of the owners)

do not have access to this report.

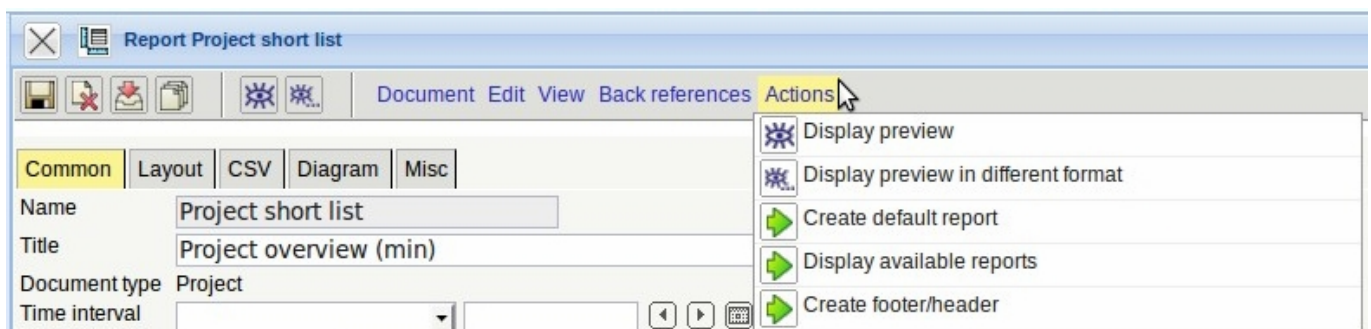

Note: The change of the authorization is only active after saving the document.

Actions in the ReportDesigner

The report includes five actions. The actions “Display preview” and “Display preview in different format” create a report directly from the designer, if the designer is accessed from a result list. The action “create default report” sets your own report back to the original configuration (it lists all the elements of the document) and the action “Display available reports” displays all reports of the selected document type (here employee).

The action “create headers/footers” allows the assigning headers and footers for the generated reports. These elements can include logos, headers and formatting information, and can be currently created exclusively by the owner.
