4.08.2 Recording Absences

Central Absence Recording

The absences can also be centrally recorded in the document attendance/absence or by using the functionality "Tracking and Recording ⇒ Absences".

Here, first the employee/employees or the unit (all employees of the location or of the department) and the period of time are selected.

In the example the attendance recording for all the employees of the unit Marketing and Sales for the period of time 01.10.2009 to 31.10.2009 is opened.

Please select date interval

In the component all the defined absences and blocked days are displayed. The blocked days are days, for which the employee has already recorded the time or for which a time-recording is no more permitted.

In the example two weeks of holiday for the employee Timothy Jones (from 02.10.2009 - 07.10.2009) are defined.

... is cleared.

Applying for Absences

If the employees have to register their own holiday, the functionality “Absence Application” can be used. This functionality works analog to recording absences, but it will not allow any options/choices by the employee or the unit.

The screenshot shows the 'Intro' window with a menu bar containing 'Standard', 'Module', 'Mein Intro', 'Intro 2', 'Intro 3', 'Intro 4', 'Intro 5', 'Intro 6', 'Intro 7', and 'Intro 8'. Below the menu bar, there are three main sections: 'Extras', 'Tracking', and 'Planning'. In the 'Extras' section, there is an icon of a hand pointing to a screen labeled 'Absence application'. In the 'Tracking' section, there is a 'TimeTracker' label and a clock icon. In the 'Planning' section, there is a 'Selected days' dropdown menu.

The screenshot shows the 'TimeTracker Timothy Jones' window. At the top, there is a date selector set to '20.10.2009' and a checkbox for 'Start time tracker on login'. Below this, there is a list of activities for 'Tuesday, 20.10.2009'. The activities are listed in a table with columns for 'From', 'To', 'Time', 'Job', 'Cost unit', and 'Note'. The activities are: 'Come and leave' (08:00 - 14:40, 6:40 h), '3-3 Programming 4-3 - 3 Introduction Projectile' (10:30 - 13:47, 3:17 h), '3-2 Installation Projectile - 3 Introduction Projectile' (13:47 - 14:40, 0:53 h), and 'Come and leave' (15:10 - 18:00, 2:50 h). The total time for the day is 9:30 h. A dropdown menu is open over the 'Job' column, showing options: 'AB 01 - conclude last month and apply for approval of', 'AB 02 - conclude current month and apply for approval of', and 'AB Apply for holiday'.

Note: The absences can be also recorded in the work area, in the module attendance/absences or in TimeTracker.

In the TimeTracker different Workflows for handling of time can be applied (period-end closing, application for holidays...). The following example shows the implementation of a holiday application. After performing the action in the TimeTracker...

...the holiday can be confirmed or denied.

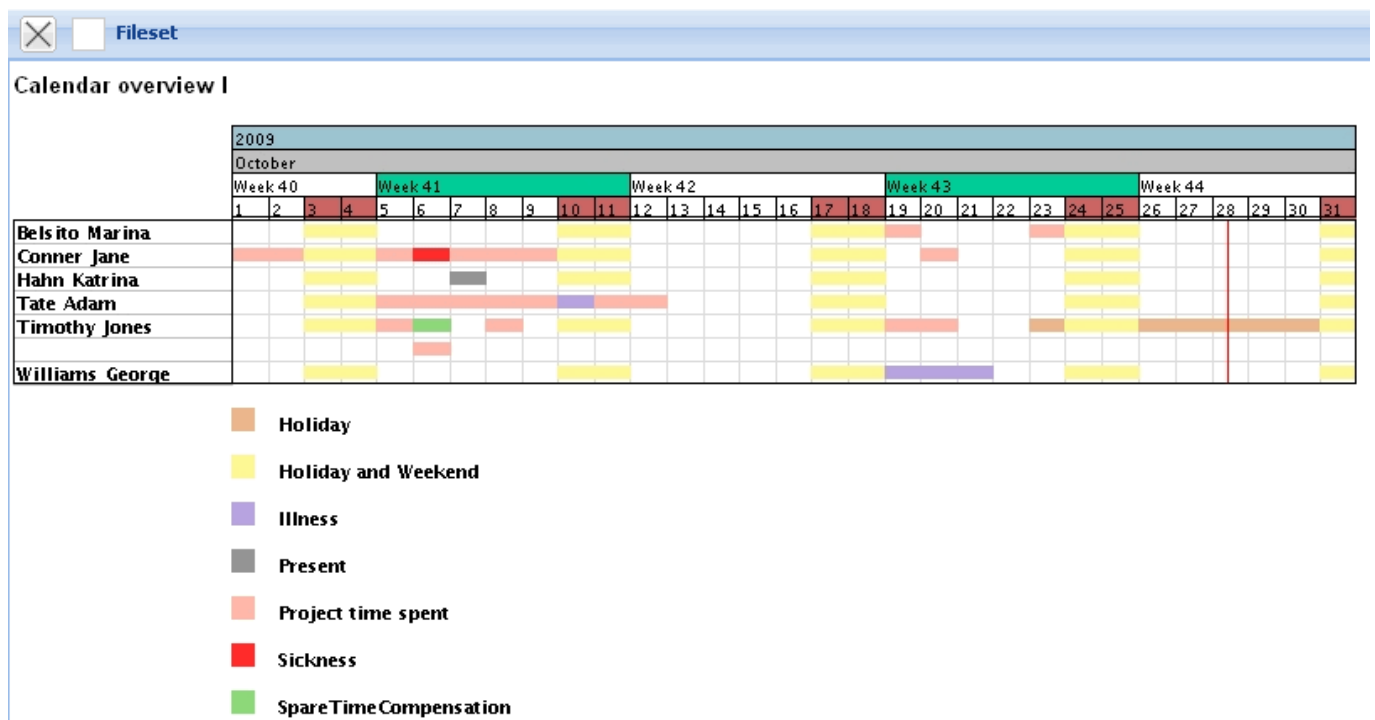

The applicant gets a message about the voting from the system.

In connection with the voting results the holiday is displayed graphically in the absence application of the TimeTracker as holiday or as denied holiday.

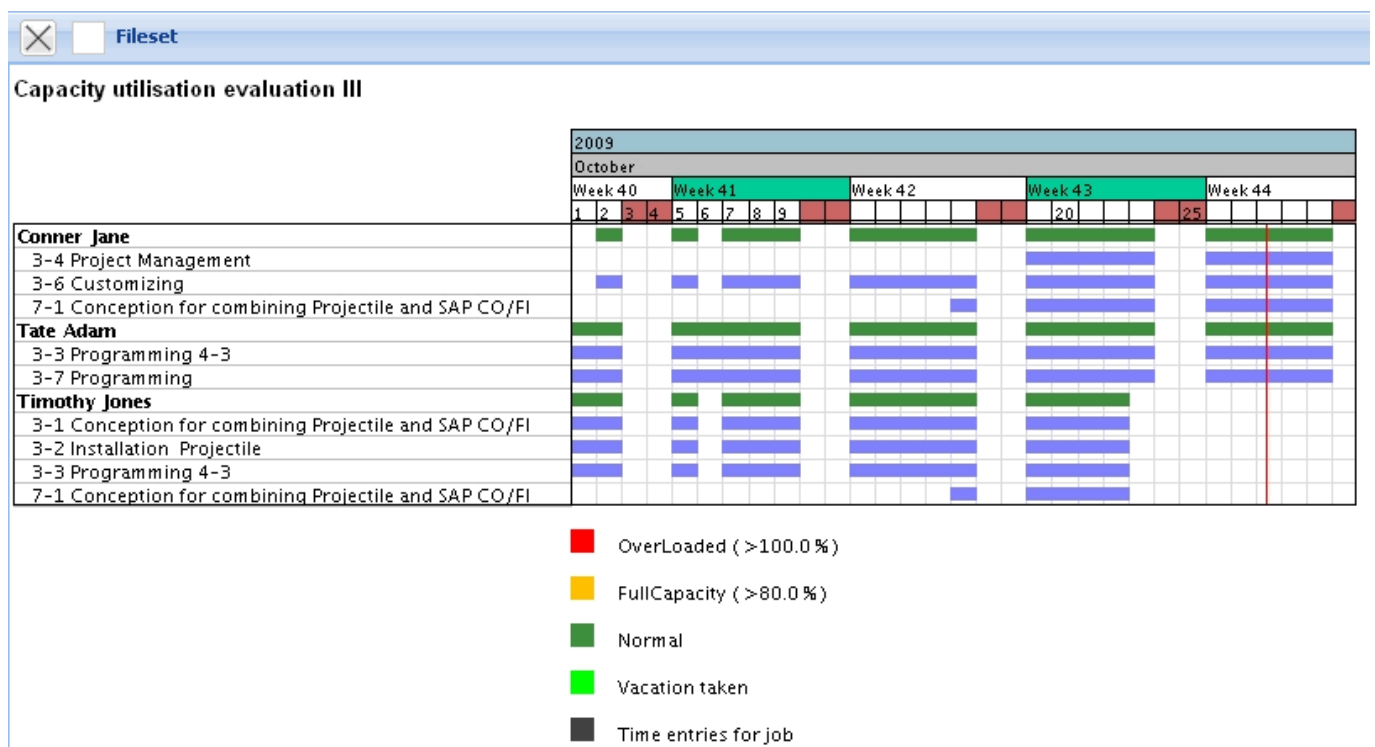

Charts

The calendar overview displays the attendance/absence of selected employees from freely defined time spans (see also Charts).

Note: The absences in the system are the basis for the complete resource management. In all the resource charts (here capacity overview III) and with suggestions the planned absence of the employees will be considered.
