4.12 Chart System

4.12.1 Applying Standard Charts

Projectile contains many standard charts. The charts are grouped by topic in the chart blocks and contain between one and up to 13 individual charts.

The charts can be opened in the work area by using the functionality “Charting”.

In the following example various project-related charts are displayed. Included are the charts: project overview chart, project structure diagram, target/actual comparison chart for projects and jobs, milestone-trend-analysis (MTA) chart, completion chart, employee occupation chart, skill-matrix, and perform report for resource planning chart.

After opening the chart type (here, the project chart) a chart document is opened. In the document selection criteria and options for the chart can be configured.

In the first part (1. Name) a name can be given for the chart if the chart is to be saved. Saving the chart is useful if the selection criteria of the chart remains constant, for example a list of all active projects for the current quarter. The saved chart can then be saved or copied to the personal clipboard or it can represent the basis for time service in order to automate the chart evaluations. Also, the charts can be generated in the background. To view the results of the chart, the evaluation must also be stored.

In the second part (2. Input Data) the input data of the chart is determined. In the third part (Main parameters) the input data can be limited through a time span.

In the first example the selection criteria for the input data for two projects are selected from the personal clipboard:

These projects are marked in the clipboard, ...

... copied and ...

... pasted into the input data.

 Perform now

If the chart results are generated, the system presents the results in the browser. This chart includes information about the projects, activities and/or jobs and agents, the estimated and actual times with remaining time/effort and the corresponding difference (planned - actual), the estimated processing period (start / end) and the status information (status, completion date and completion of the task).

Job Target/Actual

Project	Job	Employee	Planned [h]	Actual [h]	Difference [h]	Rest	Begin	End	Closed	State

Anschließend kann der Betrachtungszeitraum (3. Hauptparameter) und die weiteren Kriterien verwendet werden (4. Parameter), um die Ergebnisse der Auswertungen sinnvoll einzuschränken. Zu diesen Parametern gehört beispielsweise die Kostenstelle des Projektes, die Projektart, der Projektstatus, die Priorität und das Kennzeichen, ob das Projekt ein externer Auftrag ist oder nicht.
